KH

COMPUTERIZED FLAT KNITTING MACHINE

DEAR CUSTOMER :

Welcome to be an owner of KH-313 series-V2 computerized flat knitting machine as Kao Heng endeavors to maintain a high standard of this machine, we also pleased for your cooperation to make the machine serve longer by reading this operator manual carefully before commencing your production.

Yours sincerely,

Kao Heng Precision Machinery Industrial Co., LTD.

Address : No. 20, Lane 14, Ho Ping Rd., Panchiao, Taipei, Taiwan

Tel : 886-2-29559258

Fax : 886-2-29629153

E-mail : kauoheng@ms58.hinet.net

Website : www.kauoheng.com.tw

Model : KH-313 SERIES-V2

Gauge : G

Knitting Width : Inch

Serial No. :

Date :

Power : ø V

OVERVIEW OF KH-313 SERIES-V2

1. Yarn carrier selection
2. Carriage
3. Operation bar
4. Main cover
5. Fabric take-down roller
6. Controller
7. Main motor
8. Side tension
9. Top tension
10. Side cover

1. Points to observe

① Installation Environmental Conditions

Please install the machine as below instructions in order to use this machine in the best condition for a long period of time.

Do not install the machine at a place subject to direct sunshine and/or adjacent to a heat generation source such as a furnace/oven.

Do not install the machine at a place subject to rapid temperature changes.

The temperature should be 0°C ~ 35°C inside the controller.

Do not install the machine at a place where there is a lot of dust and dirt, or a location affected by chemical gases, sea breeze etc.

Do not install the machine at a place subject to excessive moisture.

The humidity should be 30 % ~ 80 %

Do not install the machine on a slope or unstable place.

Please connect the electric power and make sure the ground wire is connected correctly.

- ② Fig.1.1 illustrates the correct position of jacking while moving the machine. It is very important when moving the machine. The yarn carrier rail shall never be used to push the machine since it will distort the rail.

Fig.1.1 Correct position of jacking the machine

- ③ When connecting the electric power, attention must be paid to the correct voltage. And make sure the ground-wire connected.

2. Installation

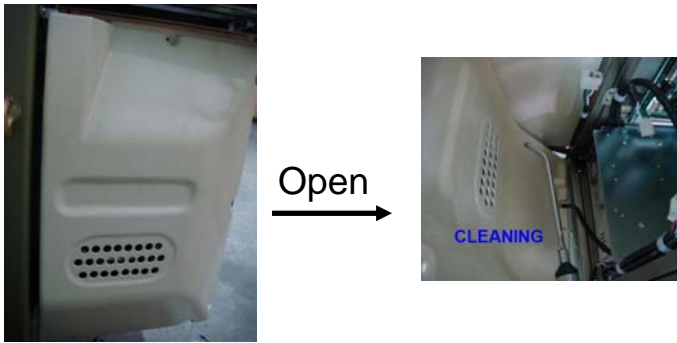

- ① After unpacking and locating the machine in the factory, it must be leveled carefully with a spirit-level to avoid machine distortion in running. We recommend the machine to be leveled with rubber padding for best result. Remove grease from the polished parts before starting to operate the machine. About the moving parts must be lubricated and cleaning according to the following instruction.

Maintenance of machine :

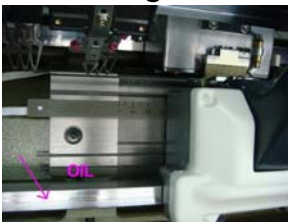

✂ Cleaning

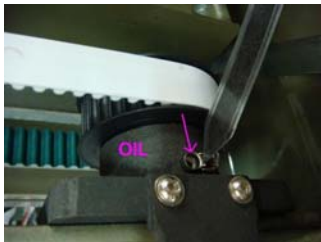

Where to clean	Interval
Top tension equipment 	Every 8-12 hours
Side tension equipment 	Every 8-12 hours
Needle beds (front & back) 	Every 8-12 hours
Yarn feeders 	Every 8-12 hours

Where to clean	Interval
<p>Cams inside carriage</p> 	Every 3 months
<p>Filter in front cover of main motor</p> 	Every 8-12 hours
<p>Filter in front cover of main motor</p> 	Every 8-12 hours
<p>Internal controller</p> 	Once a month

Where to clean	Interval
Open the cover of main motor to clean 	Once a year
Open back side of controller to clean 	Once a year

※ Oil Lubrication

Where to oil	Oil type	Interval
Carriage rail 	SAE 10W-10 oil	Every 8-12 hours
Carrier rail & Stopper 	SAE 10W-10 oil	Every 8-12 hours

Where to oil	Oil type	Interval
Needle beds (front & back) 	Kauo Heng oil 1	Every 8-12 hours
Driven pulley bracket 	SAE 10W-10 oil	Every 3 months
Chain (Take-down) 	High-Temp Grease	Once a year

- ② Raise the yarn stand till the end of the tubes is leveled with the base plate, tighten the screws and connect the plug of stop motion situated at the left rear end.

3. Operation

3.1 Power switch

As Fig.3.1 front side of controller, easily find two switches. Flip upward is “ON” and downward is “OFF”.

Fig.3.1 Front side of controller

3.2 Operation bar

3.2.1 Inching : When turning forward of the operation bar, machine operates slowly and stops when you loosen.

3.2.2 Starting : When turning backward of the operation bar, machine starts. Machine starts from slow speed and runs in preset speed when reaching the first terminal sign.

3.2.3 Stop : When the machine is running, you can turn operation bar in any direction to stop machine.

3.2.4 Machine executes protection mode automatically when machine stops over 3 seconds. You must turn twice backward of the operation bar to start.

Fig.3.2 Starting operation bar

3.3 Yarn feeder

The position of carrier is adjusted according to the desired knitting width, correctly make yarn feeder beside the end working needle by 10 mm. The yarn feeder must be in the central position between front and rear needles, also check its height refer to Fig.3.3. When work several yarn feeder in knitting, the position of carrier should be adjusted to make each yarn feeder not be overlapped, it avoids damage of the parts. The yarn carrier on rail must be adjusted in easy moving, adjustment refers to Fig.3.4.

Fig.3.3 Position of yarn carrier

Fig.3.4 Adjustment of carrier

3.4 Top tension

Top tension springs should have the correct tension, the opening of the knot-catcher must be set according to the yarn count that is being knitted.

Fig.3.5 Top tension

3.5 The latch brush

Latch brush is important to prohibit the needle latch to close in knitting, the correct brush setting is illustrated in Fig.3.6.

Fig.3.6 Correct position of brush

4. Clear filter

Filters are equipped in the controller and in the parts of main motor, it prohibits dust to come inside. Please take out the filter and dust it often refer to Fig.4.1.

Fig.4.1 Cleaning filter

5. Needle bed

5.1 KH-313-V2 needle bed

KH-313-V2 the structure of front and rear needle bed is the same with regular needle high butt and low butt.

Fig.5.1 The structure of front & rear needle bed

For the knitting needles in unused you don't need to dismantle them. All you have to do is to push them in the unactive position. In Fig.5.2 take out the steel wire firstly, and push to the shown area and replace the steel wire.

Fig.5.2 Unworked position

5.2 KH-313J&TJ&N-V2 needle bed

The structure of the front and rear needle bed is the same.

KH-313J&N-V2 is with regular needles high butt and low butt.

KH-313TJ-V2 is with transfer needles high butt and low butt. They all have one more step of jacks on front and rear needle beds to do more function.

Fig.5.3 The structure of front & rear needle bed

The unused butt needles and jacks you jacks you just push them down to the unworked position. Of course you must pull out and back the steel wire A & B for procedure.

Fig.5.4 Unworked position

6. Cam plate distance

The distance between cam plate and needle bed is maximum 0.1 mm, Fig.6.1 shows how to check and adjust. Please check it by every 3 months, loosen the stepped screw and turn the bearing pin to adjust the distance, make sure to tighten the stepped screw after adjustment.

Stepped screw

Bearing pin

Fig.6.1 Adjust cam plate distance

7. Remove carriage

When it becomes necessary to remove the carriage, it can be remove from the left hand side or the right hand side. The procedures are as following :

- ① Turn off the power firstly.
- ② Remove the side cover.
- ③ Disconnect the two plugs on back of carriage.
- ④ Remove the fitting screw and cap bolt on connecting plates as shown in Fig.7.1. Then pay attention to remove the carriage.
- ⑤ After replacing the carriage, it must be confirmed that the plugs, fitting screws and cap bolts are all completely connected, then start machine.

Fig.7.1 Remove the carriage

8. Fabric take-down system

In principle of the take-down tension strength must be small and average.

The take-down system is controlled by torque motor. There are two important things to adjust the take-down tension strength.

Each roller can be adjusted individually. The pressure of roller gets larger and the speed of fabric take-down gets faster.

- ⊙ To detect fabric falling or wraparound, there is equipped with a press-off detector in the front of roller and a fabric roll-up detector in the back of roller. The machine will stop automatically when the fabric happens fall or wraparound.

Fig.8.2 Fabric take-down system

9. Racking mechanism

- ① The rear bed can be racked five (5) pitches, the initial position "0". See the left selvedge of needle bed, the corresponding position that the first needle of rear is on the left hand side of the first needle of front. As shown in Fig.9.1.
- ② In editing instruction you can choose the left racking or the right racking by one pitch.
- ③ In each racking position the rear bed and the front bed must be kept in correct corresponding relation. You check it with pushing one front needle to tuck position, the hook of front needle and the knock-bit of rear bed should be at the same position.

Fig.9.1 Initial position of needle bed

- ④ If there has racking instruction in programming, you must enter the test mode to rack the needle bed in the set position before you execute run, and make sure the racking mechanism is matched your programming.
 - ⊙ Needle position of transfer must be at the left -2 and at the right +3 of needle bed.

- ⑤ If the corresponding position of needle bed is not proper, loosen the stepped screws and adjust the rear bed to correct position, then tighten the stepped screws after adjustment. Refer to Fig.9.2.

Fig.9.2 Adjusting the position of needle bed

0. START

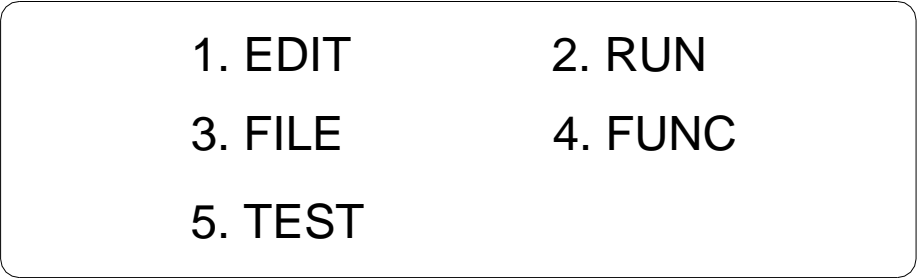

WELCOME TO KAUOHENG SYSTEM

Fig.0-1

When turning on the machine, it will appear this screen and display main menu after you press any key.

When you switch on the machine, then it displays **【MEMORY ERROR】** or **【FILE ERROR】**, you must switch off the machine and contact our agent or our service department.

There are five selections in main menu as Fig.0-2 illustrates and numeric corresponds to selection. Please directly press numeric key on keyboard then enter it.

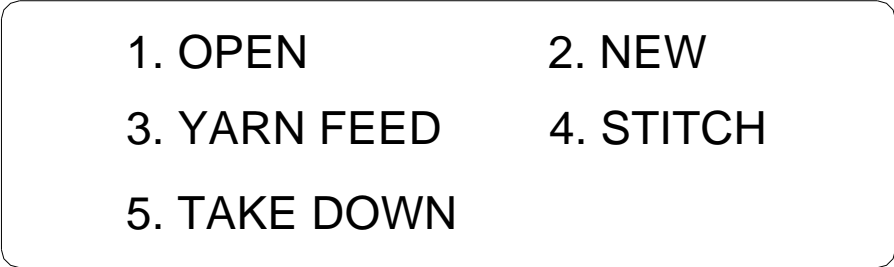

1. EDIT	2. RUN
3. FILE	4. FUNC
5. TEST	

Fig.0-2

1. EDIT

Press **1** in main menu, then display edit menu. There are five selections in edit menu as Fig.1-1 illustrates.

1. Open file 2. New file 3. Yarn carrier 4. Stitch 5. Take down speed

1. OPEN	2. NEW
3. YARN FEED	4. STITCH
5. TAKE DOWN	

Fig.1-1

1.1 OPEN : Open file

Press **1** in edit menu, and then the screen displays as Fig.1-2.

PLS-IN FILE-NAME : _				
SURE				EXIT

Fig.1-2

Remark : In screen there are five small squares, each one corresponds to **F1** ~ **F5** on keyboard, blank means out of function. For example, in Fig.1-2, **F1** is SURE, **F2** ~ **F4** are blank in no function, **F5** is EXIT. In other screen menu the operation will be the same.

In Fig.1-2, input the file name with numeric, and press **F1** : SURE ; then enter program to edit. When opening the file, input file name which is not existent. And the screen will appear Fig.1-3 warning screen, and then press **F1** to enter file or press **F5** to exit.

MISS-FILE NAME. RE-KEYIN FILE NAME ?				
SURE				EXIT

Fig.1-3

Edit screen appears two lines of instructions, cursor stops on the racking position, directly use numeric key and left, RIGHT key to edit instruction, or press UP, DOWN key change to other line. **+/-** key is for change of rack to left or right. Edit instruction, and please refer the instruction explanation.

Enter Fig.2-2, display will show the file name, system (carriages)

TWIN for separation or COMB for combination, START (start needle), END (end needle), SET (total pieces), PIECES (finished pieces), after setting press **F1** to enter Fig.2-3.

ERROR MESSAGE

After you finish inputting the instruction for the program that occurs incorrect action or wrong instruction to the function of machine, it will automatically appear ERROR message on RUN mode.

Error message table

Message	Explanation
Line not even	To edit a program, the total lines of program must be an even number. Otherwise the carriage does not return to the left side to proceed the next knitting piece.
Carrying feeder	It is an error that the carriage carries a yarn feeder when you set carriage in an empty action without yarn feeder.
None feeder	When you set the action of knit, the carriage has to carry a yarn feeder.
Rack error	Before ending the program, the needle bed must be racked back to the home position. In case the program racks one level to the right, it needs rack one level to the left back to the home position before ending.
Feeder 1 error	Before ending the program, the yarn feeder must return to home position, Otherwise it is impossible to proceed the next knitting piece.
Feeder 2 error	
Feeder 3 error	
Feeder 4 error	
Feeder 5 error	
Feeder 6 error	
Repeat error	Repeat must be set in even lines of amount, for example the start line is an odd and the end line must be an even, or from an even to an odd. (From odd line to odd line or from even line to even line are unacceptable.)
Rack over speed	In racking, the maximum of knitting speed is No.4.
Start-ndl error	The number of start-needle must be smaller than the number of end-needle.
End-ndl error	The number of end-needle must be larger than the number of start-needle, or smaller than the number of total-needle.

Tab.2-1 Error message table

Error message table

Message	Explanation
SPEED OVER WITH RACKING	In racking, the maximum of knitting speed is No.6
START NEEDLE ERROR	The number of start-needle must be smaller than the number of end-needle.
END NEEDLE ERROR	The number of end-needle must be larger than the number of start-needle, or smaller than the number of total-needle.
START SPEED=0	The first line Speed must be setting. don't setting "0".
TRANSFER ERROR	Without transfer function.
END COURSE ERROR	Over 998 courses.

Tab.2-2 Error message table

- ※ Please correct the error of edited program according to the error message of LCD display.

After finishing checking the system and confirming the program executive then the screen displays as Fig.2-3.

TOTAL : 0404		COURSE : 024	
LEFT : 023000		RIGHT : 000000	
LEFT : ENABLE		RIGHT : DISABLE	
SURE			EXIT
